

HMIN 103 : Données du WEB
TD1 : XML & DTDs (en binôme)

1) Des schémas aux données :

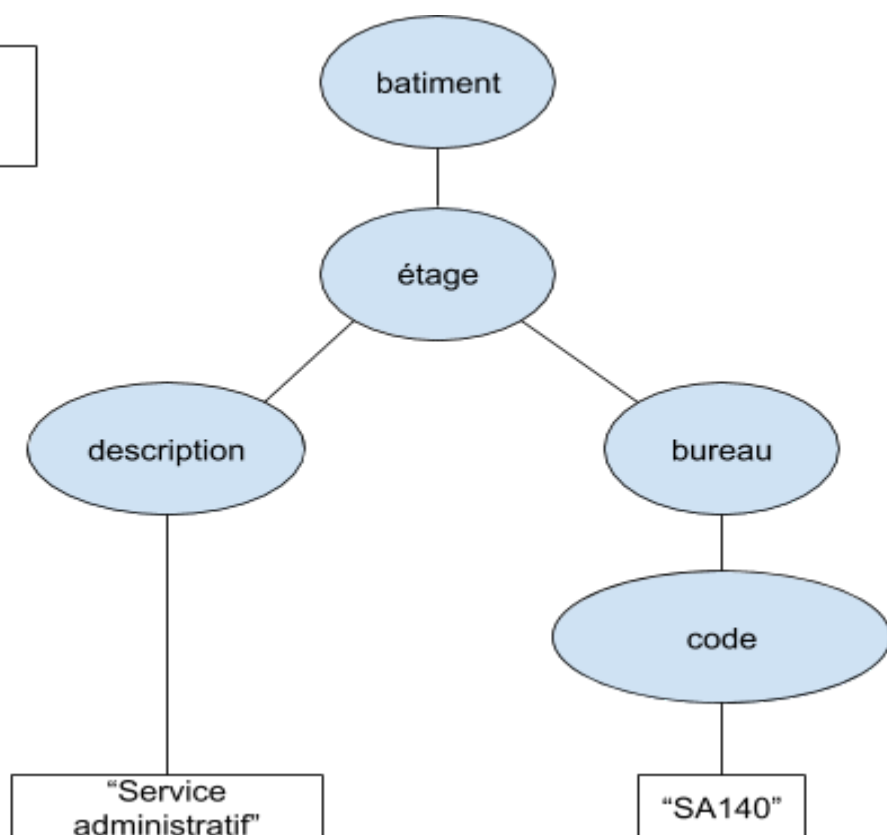

DTD 1
premier arbre

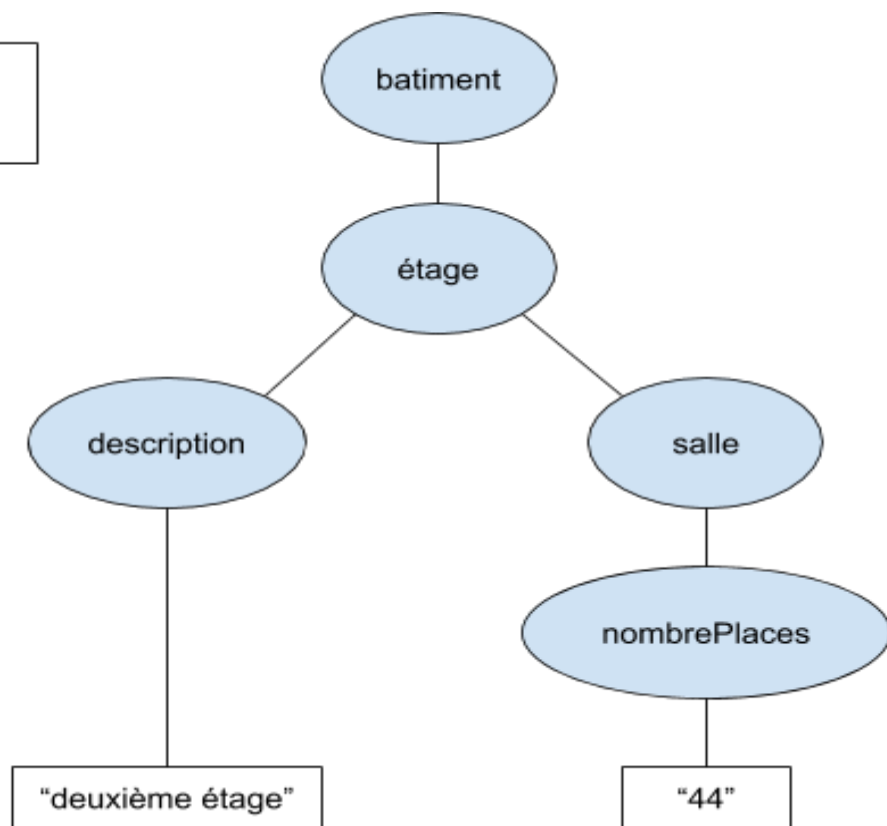

DTD1
second arbre

DTD 2
premier arbre

DTD 2
second arbre

2) Des données aux schémas

XML 1:

- 1)

```
<! DOCTYPE A[
    <! ELEMENT A (C,B)+>
    <! ELEMENT B (A*,E*)>
    <! ELEMENT C (A*,D*)>
    <! ELEMENT D (#EMPTY)>
    <! ELEMENT E (#EMPTY)>
]>
```
- 2)

```
<! DOCTYPE A[
    <! ELEMENT A (C,B)*>
    <! ELEMENT B (A|E)>
    <! ELEMENT C (A|D)>
    <! ELEMENT D (#EMPTY)>
    <! ELEMENT E (#EMPTY)>
]>
```

XML 2:

- 1)

```
<!DOCTYPE B [
    <!ELEMENT B (B, C+, E*)>
    <!ELEMENT C (#EMPTY)>
    <!ELEMENT E (#EMPTY)>
]>
```
- 2)

```
<!DOCTYPE B [
    <!ELEMENT B (B, C+, E?)>
    <!ELEMENT C (#EMPTY)>
    <!ELEMENT E (#EMPTY)>
]>
```

XML 3:

- 1)

```
<! DOCTYPE A[
    <! ELEMENT A (C,B)+>
    <! ELEMENT B (#EMPTY)>
    <! ELEMENT C (#EMPTY)>
]>
```

2) <! DOCTYPE A[
 <! ELEMENT A (C,B)*>
 <! ELEMENT B (#EMPTY)>
 <! ELEMENT C (#EMPTY)>
]>

XML 4 :

1) <!DOCTYPE B [
 <!ELEMENT B (C, D,E)+>
 <!ELEMENT C (#EMPTY)>
 <!ELEMENT D (#EMPTY)>
 <!ELEMENT E (#EMPTY)>
]>

2) <!DOCTYPE B [
 <!ELEMENT B (C+, D,E)*>
 <!ELEMENT C (#EMPTY)>
 <!ELEMENT D (#EMPTY)>
 <!ELEMENT E (#EMPTY)>
]>

XML 5:

1) <! DOCTYPE A[
 <! ELEMENT A (#EMPTY)>
]>

2) <! DOCTYPE A[
 <! ELEMENT A (A)*>
]>

XML 6:

1) <! DOCTYPE A[
 <! ELEMENT C (#PCDATA)>
 <! ATTLIST C id CDATA #REQUIRED>
 <! ATTLIST C friend CDATA #REQUIRED>
]>

2) <! DOCTYPE A [
 <! ELEMENT C (#PCDATA)>
 <! ATTLIST C id CDATA #IMPLIED>
 <! ATTLIST C friend CDATA #IMPLIED>
]>

3) Modélisation : à quoi ressemble un Tweet ?

```
<!DOCTYPE tweet [  
  <!ELEMENT tweet (date, message?, gps, user, url_media*)>  
  <!ATTLIST tweet idT ID #REQUIRED>  
  
  <!ELEMENT date (seconds, GMT)>  
  <!ELEMENT seconds (#PCDATA)>  
  <!ELEMENT GMT (#PCDATA)>  
  
  <!ELEMENT message (text, ref_tag*, ref_user*)>  
  <!ATTLIST message length CDATA #IMPLIED>  
  <!ATTLIST message type CDATA #IMPLIED>  
  <!ATTLIST message color CDATA #IMPLIED>  
  <!ATTLIST message lang CDATA #IMPLIED>  
  <!ELEMENT text (#PCDATA)>  
  <!ELEMENT ref_tag (#PCDATA)>  
  <!ELEMENT ref_user (#PCDATA)>  
  
  <!ELEMENT gps (latitude, longitude, altitude)?>  
  <!ELEMENT latitude (#PCDATA)>  
  <!ELEMENT longitude (#PCDATA)>  
  <!ELEMENT altitude (#PCDATA)>  
  
  <!ELEMENT user (name, url_avatar, follow_count, sub_count, description?)>  
  <!ATTLIST user idU IDREF #REQUIRED>  
  <!ATTLIST user city CDATA #REQUIRED )>  
  <!ATTLIST user country CDATA #REQUIRED)>  
  <!ATTLIST user OS CDATA #REQUIRED)>  
  <!ELEMENT name (#PCDATA)>  
  <!ELEMENT url_avatar (#PCDATA)>  
  <!ELEMENT follow_count (#PCDATA)>  
  <!ELEMENT sub_count (#PCDATA)>  
  <!ELEMENT description (#PCDATA)>  
  
  <!ELEMENT url_media (#PCDATA)>  
]>
```

4) Instance de données

```
<tweet idT="1">
  <date>
    <seconds>40</seconds>
    <GMT>1</GMT>
  </date>
  <message length="140" type="text" color="black" lang="en">
    <text><ref_user>example</ref_user> absolutely smashed it at
    <ref_tag>mtvlivelockdown</ref_tag> ! Catch him at the official
    <ref_user>clubmtvuk</ref_user> after party tonight @10 pm</text>
  </message>
  <gps>
    <latitude>0</latitude>
    <longitude>0</longitude>
    <altitude>0</altitude>
  </gps>
  <user idU="1" city="Montpellier" country="France" OS="Windows">
    <name>MTV Music</name>
    <url_avatar>null</url_avatar>
    <follow_count>3000</follow_count>
    <sub_count>12042</sub_count>
    <description>MTV Music UK</description>
  </user>
  <url_media></url_media>
</tweet>
```

5) Synthèse des modèles

LEUR BINÔME

```
<tweet id="9348398423" lang="english">
  <message font-size="12" font-type="normal" color="standard">
    .@example absolutely smashed it at #mtvlivelockdown!
    Catch him at the official @clubmtvuk after party tonight @ 10pm
  </message>
  <timestamp timezone="UTC">1536919024</timestamp>
  <author id="8821189298219">
    <name>MTV Music</name>
    <url>//twitter.com/MTVMusic</url>
    <description>music / pop stars.</description>
    <picture format="jpg">RVpLLjMyMzkuLi4=...</picture>
    <follower-count>666000</follower-count>
    <subscription-count>5952</subscription-count>
  </author>
</tweet>
```

NOTRE BINÔME

```
<tweet idT="1">
  <date>
    <seconds>40</seconds>
    <GMT>1</GMT>
  </date>
  <message length="140" type="text" color="black" lang="en">
    <text><ref_user>example</ref_user> absolutely smashed it at
      <ref_tag>mtvlivelockdown</ref_tag> ! Catch him at the official
    <ref_user>clubmtvuk</ref_user> after party tonight @10 pm</text>
  </message>
  <gps>
    <latitude>0</latitude>
    <longitude>0</longitude>
    <altitude>0</altitude>
  </gps>
  <user idU="1" city="Montpellier" country="France" OS="Windows">
    <name>MTV Music</name>
    <url_avatar>null</url_avatar>
    <follow_count>3000</follow_count>
    <sub_count>12042</sub_count>
    <description>MTV Music UK</description>
  </user>
  <url_media></url_media>
</tweet>
```

Différence entre les modèles :

- : utilisation des balises de référencement dans la partie texte afin de les démarquer
- : stockage de la langue en attribut dans des éléments distincts : message et tweet
- : stockage de l'OS en tant qu'attribut de l'utilisateur contre un stockage en élément du tweet

Unification des modèles :

```
<tweet idT="1" lang="en">
  <timestamp timezone="UTC">
    12305904
  </timestamp>
  <message length="140" type="text" color="black">
    <text><ref_user>example</ref_user> absolutely smashed it at
ref_tag>mtvlivelockdown</ref_tag> ! Catch him at the official
<ref_user>clubmtvuk</ref_user> after party tonight @10 pm</text>
  </message>
  <gps>
    <latitude>0</latitude>
    <longitude>0</longitude>
    <altitude>0</altitude>
  </gps>
  <user idU="1" city="Montpellier" country="France" OS="Windows">
    <name>MTV Music</name>
    <url_avatar>null</url_avatar>
    <follow_count>3000</follow_count>
    <sub_count>12042</sub_count>
    <description>MTV Music UK</description>
  </user>
  <url_media></url_media>
</tweet>
```

6) Cas particuliers des DTDs

DTD 1:

```
<!DOCTYPE B>
<B>
  <A><D>something</D></A>
  <C>something<D>another thing</D></C>
</B>
```

DTD 2:

```
<!DOCTYPE EMPTY>
<EMPTY/>
```

DTD 3:

```
<!DOCTYPE A>
<A>
  <B><A/></B>
</A>
```

DTD 4:

```
<!DOCTYPE C>
<C><C/><C/></C>
<C><C/></C>
```

DTD 5:

```
<!DOCTYPE C>
<C>
  <C/><EMPTY/>
</C>
```

DTD 6:

L'élément B n'est pas déclaré, il n'est pas possible de donner un document XML valide.
